SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM FOR THE MONTH OF DECEMBER 1903.

THROUGHOUT the month weather in Bengal was fine without interruption; the sky was continuously cloudless, and temperature generally below the normal, the day and night being both on an average for the month cooler than usual.

The only rainfall occurred in Orissa, and that was in the early days of the month, when a slight disturbance extended northwards from Madras along the west coast. The showers were light and scattered and in no case exceeded a third of an inch.

While weather was fine and settled in the north of the Bay, it was otherwise in the south, where frequent disturbances occurred. Three, at least, at intervals of about ten days, passed over the south of the Bay and affected weather on the Madras Coast; and on one occasion, about the 3rd or 4th, strong winds and a very rough sea developed with only small changes of the barometer A slight depression crossed the Madras Coast near Negapatam shortly after the middle of the month. There was some increase of wind force, and moderately heavy rainfall in the neighbourhood of Negapatam; but the disturbance was of brief duration and of only local importance.

The third disturbance occurred towards the close of the month, and caused unusually heavy rainfall at Madras. The depression moving apparently from the south-east appeared, with but little warning, on the north Ceylon and south Madras coasts on the 29th. Defect near the centre was about ·1 inch, so the depression as measured by the barometric fall was slight and not likely to have much influence on the weather in Madras. The depression, however, instead of moving westward as depressions at that time of the year usually do, recurved northwards, and passing over the eastern Madras districts on the 30th filled up over the Bay to the east of Nellore on the 31st. While the recurving was taking place, that is during part of the 30th and 31st, heavy rain fell, at the first along the coast between Negapatam and Madras, and afterwards near Madras only. After the depression had disappeared cloud and rainfall extended northwards to the Circars and light cloud formed in Bengal.

The first of these three disturbances and the last were, though in different respects, exceptional in character. The former was accompanied by the sudden development of a severe gale over the south of the Bay. Seeing this sudden change was not a result of any rapid fall of pressure, it appears reasonable to infer that the area of lowest pressure was a considerable distance to the south, or that the gale was due in part to the rapid rise of pressure which for a day or two previous had been moving southward from Bengal. The fall of pressure in the extreme south on the 4th and the brisk rise on the 3rd contributed jointly to the steep pressure gradient which was over the south and centre of the Bay at the same time as the strong winds. The depression passed westward into the Arabian Sea, and weather rapidly improved. The rainfall which accompanied the storm in Madras was not more than moderate.

The latter of the two disturbances caused only moderate winds; it moved northwards instead of westward, and its chief feature was the heavy rainfall on the Madras coast on the 30th and 31st.

Strong winds were reported from the east of the Bay when the disturbed weather was being experienced in the south-west, so that north-east monsoon conditions probably at those times prevailed over the whole of the south of the Bay. Except for the strong winds, however, weather was not disturbed on the Burma Coast, and it continued fine and settled in the north of the Bay and in Bengal throughout the month.

Pressure.—Oscillations were generally small in Bengal and the north of the Bay, and a conspicuous feature of the disturbances in the south of the Bay was the shallow character of the depressions and the small changes of pressure which preceded their approach. Pressure was therefore steady and the variation from the normal for the month is not large. Over the Bay there was defect of ·02 inch. In Bengal also there was defect, but more irregular and in some cases larger than at coast stations. At the majority of inland stations defect was less than ·02 inch.

Temperature—Was below the normal in the southern districts during the greater part of the month, and at times there was a rather large defect, notably about the middle of the month. In the north of the Province and more especially in the north-east, temperature was not so uniformly low, but excess was small, and as there were times, as at the beginning of the month, when defect was large, the mean for the whole month is everywhere below the normal. Defect in maximum temperature is about 1°, while in minimum temperatures it ranges up to 2° in the western districts. Mean defect is nearly 2° in Orissa, 1°·4 in Chota Nagpur, 1°·1 in South-West Bengal, 1° in Bihar, and half a degree in North and East Bengal and Orissa.

Rainfall—Was nil except in Orissa, where a few light scattered showers fell on the 1st and 2nd.

The following table gives the average rainfall for each Division, month by month, throughout the year, expressed as a percentage of the normal fall for each month:—

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

FINAL FORECAST ON THE SUGARCANE CROP OF BENGAL, 1903.

THE following note is published for general information.

A. EARLE,

Secy. to the Govt. of Bengal.

The 25th January 1904.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

Final Forecast on the Sugarcane Crop of Bengal, 1903.

Character of the Season.—From the beginning of October to the end of the cane-planting season drought prevailed throughout the Province except in the Orissa and Chittagong Divisions and in parts of the Burdwan, Presidency and Dacca Divisions, where sufficient rain fell in January, February and March for planting canes. In April and May also rainfall was in defect everywhere except in Chota Nagpur, and the deficiency continued through June all over the Province save in North Bengal, in the North Gangetic

districts of Bihar, in some parts of the Presidency Division and in Dacca, Mymensingh, Tippera and Noakhali. During the cane-growing season, that is, from June to November, the conditions were particularly favourable for this crop, and the canes that had been planted gave much better results than had been anticipated at first. In December there was practically no rain, which is a condition favourable for ripening and harvesting.

2. *The area planted* was affected by the unfavourable conditions that prevailed at the early part of the season, the estimated area this year being 645,400 acres against 673,500 acres planted in 1902 and against 690,100 acres, the normal area under sugarcane. The normal area has been raised in this report from 689,100 acres to 690,100 acres owing to a revision made by the Collector of Bankura.

3. *Character of the Crop.*—As will appear from Appendix I, the crop in 16 districts, viz., in Birbhum, Bankura, Rajshahi, Dinajpur, Rangpur, Pabna, Dacca, Mymensingh, Faridpur, Patna, Gaya, Sonthal Parganas, Cuttack, Balasore, Hazaribagh and Singhbhum, is estimated at or above the normal. In nine districts, viz., in Hooghly, 24-Parganas, Tippera, Shahabad, Champaran, Bhagalpur, Purnea, Malda and Manbhum, the crop is estimated at between 90 and 99 per cent. In the remaining districts the estimate is from 60 to 89 per cent. Since the publication of the preliminary forecast in August, prospects improved in 10 districts, remained stationary in 29 and deteriorated in 6. According to the present estimate of the District Officers, the outturn of the crop for the whole Province comes to 92 per cent., which I had anticipated in the preliminary forecast. Considering the favourable weather which prevailed at the end of the season, I am inclined now to raise the estimate by another 2 per cent., *i.e.*, to a 15-anna crop.

4. *Gross outturn.*—Accepting the provincial outturn to be 94 per cent. of the normal, the probable gross outturn of cane *gur* or raw sugar at 22 cwts. per acre, comes to 13,346,900 cwts., as compared with 13,631,600 cwts. produced last year.

5. *Other sources of sugar.*—The information available on this subject is still very incomplete. The total amount of raw sugar or *gur* produced in these Provinces from date-palm is estimated by the District Officers at 2,292,317 cwts., and that from palmyra-palm and other sources at 7,109 cwts.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⌓, dew.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

FORECAST OF THE LATE COTTON CROP OF BENGAL, 1903-1904.

THE following note is published for general information.

A. EARLE,

Secy. to the Govt. of Bengal.

The 4th February 1904.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

Forecast of the Late Cotton Crop of Bengal, 1903-1904.

Character of the Season.—The late cotton crop, which is sown in autumn and is harvested at the beginning of summer, is grown in only fifteen districts of this Province, the most important being Saran (14,900 acres), Muzaffarpur (6,100 acres), and Cuttack (5,700 acres). It is not grown at all in Bengal Proper, except to a small extent in the districts

of Bankura and Midnapore. The rainfall in September was defective everywhere, except in Bankura, Midnapore, Balasore and Singhbhum. In October the rainfall was plentiful in all the late cotton districts, and in November light but scattered showers were obtained over the Province, except in the Patna and Bhagalpur Divisions. There has been no rain since then, and the season has not been altogether favourable for this crop.

2. *Area sown.*—Since the issue of the forecast of 1902-03 the Collectors of Monghyr and Bhagalpur have submitted revised figures for normal area. The total normal area under the late cotton crop in the whole Province is now estimated at 50,200 acres only. The area planted this year is estimated at only 39,900 acres against 42,000 acres sown last year.

3. *Character of the Crop.*—It will be seen from the statement appended to this note that out of the fifteen districts in the Province in which late cotton is grown, only two, viz., Bhagalpur and Cuttack, report an outturn of 100 per cent., in five the estimate varies from 80 to 96 per cent., and in six from 70 to 79 per cent., while in Muzaffarpur and Angul the crop is estimated at 52 and 50 per cent., respectively. According to the estimate of the District Officers the Provincial outturn is expected to be 76 per cent. of a normal crop, but there is reason to believe that the outturn has been under-estimated in some districts, and the crop that will in all probability be actually harvested is not likely to fall below 80 per cent. of a normal crop.

4. *Gross outturn.*—According to the district estimates the total yield of this crop will be 2,377,100lb as compared with 2,543,100lb of last year.

S. L. MADDOX,

Offg. Director of Land Records and Agriculture, Bengal.

CALCUTTA,

The 29th January 1904.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⌓, dew; p, passing temporary showers.

PRELIMINARY FORECAST OF THE WHEAT CROP OF BENGAL, 1903-1904.

THE following note is published for general information.

A. EARLE,

Secy. to the Govt. of Bengal.

The 12th February 1904.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

Preliminary Forecast of the Wheat Crop of Bengal, 1903-1904.

Preliminary.—Wheat is grown chiefly in the Bihar districts, also in Murshidabad, Nadia, Rajshahi, Rangpur, Pabna, Hazaribagh, and Palamau.

2. *Character of the season.*—On the whole, the season has been favourable for this crop, as the soil had plenty of moisture during the sowing and also in the first part of the

growing season. In Chota Nagpur the rainfall was three times, and in Bihar about double the normal during the month of October. In November, that is, at the early part of the growing season of the crop, light showers were obtained all over the Province, except in Bihar and Bhagalpur Divisions, where the crop has suffered somewhat from drought at the latter part of the season.

3. *Area sown.*—The total normal area under wheat in the Province is now returned at 1,498,900 acres, against 1,507,400 acres reported last year. The reduction is due to a revision made by the District officers of Mymensingh, Ranchi, and Jalpaiguri. The area planted this year is estimated at 1,501,200 acres, against 1,417,000 acres sown last year.

4. *Character of the crop.*—From the annexed abstract of the district returns, it will be seen that of the nineteen large wheat-growing districts in the Province, only five (Pabna, Patna, Gaya, Malda and Hazaribagh) anticipate a normal; outturn; in six the outturn is estimated at from 90 to 98 per cent.; in four it varies between 80 and 89 per cent.; while in the remaining four districts, 63 to 76 per cent. of a normal crop is anticipated. According to the estimates of local officers, the outturn for the whole Province works up to an 89 per cent. crop; but considering that the failure of winter rice in many districts, specially in Bihar and Chota Nagpur Divisions, induced the cultivators to sow wheat in September and early in October, the dry weather that has prevailed since December will not materially affect the normal outturn, and I am inclined to raise the general outturn to 94 per cent., *i.e.*, 15 annas of a normal crop.

Offg. Director of the Dept. of Land Records and Agriculture, Bengal.

Burdwan ...	Burdwan ...	1,687,680	1,284,200	1,500	1,500	2,100	87	83	The increase in the estimated area is in the Katwa subdivision, where the crop is reported partly to have suffered for want of rain and partly damaged by insects in some parts of thana Keugaon.	
	Birbhum ...	1,121,920	776,300	5,000	5,600	5,000	100	100	The wheat crop may yield an average outturn if the rain fall in the current or in the next month.	
	Bankura ...	1,677,440	642,800	5,500	5,000	5,100	53	79	Owing to the rainfall in October 1903, there was sufficient moisture in the fields, and hence a comparatively larger area was cultivated with this crop during the year. The outturn may be estimated at 79 per cent. against 53 per cent. of the last year.	
	Midnapore ...	3,319,040	2,190,600	2,100	2,600	2,600	84	85	Deficiency of outturn is due to want of seasonable rain.	
	Hooghly ...	1,067,360	488,900	100	100	100	75	50	This crop is not doing well owing to rainfall in the beginning of November 1903.

	Nadia ...	1,788,160	1,043,800	23,100	22,600	24,300	55	63	The increase in the area and outturn as compared with that of the last year is due to seasonable rainfall.	
	Murshidabad	1,371,520	965,500	130,000	114,400	106,600	54	76	The figures in column 6 have been revised by the Subdivisional Officer of Lalbagh. The decrease in area is due to the floods which prevented some area from being sown. The increase in the outturn is due to the seasonable rain.	
	Jessore ...	1,872,000	1,203,800	2,700	1,300	1,200	43	44	The decrease in area is due to want of rain in sowing time.

	Gaya	3,015,680	2,207,500	157,600	110,300	159,300	100	100	The large increase in area sown with wheat crop this year is due to the fact that large patches of land which could not be sown with rice owing to the failure of rain at the proper season were left fallow and were cropped with wheat and other *rabi* crops.	
	Shahabad ...	2,798,720	1,841,800	122,000	121,000	120,200	89	86	The small decrease both in the area and outturn is reported to be due to late sowing in the Sasaram subdivision and want of moisture at the time of sowing in the Buxar subdivision.	
	Saran	1,710,465	1,357,200	89,400	89,400	89,200	90	93	The failure of Christmas rain has told much upon the prospect of the crop.	

Bhagalpur ...	Champaran ...	2,259,840	1,447,600	105,300	111,200	104,200	75	90	The decrease in the area is due to the excessive rain in October, and the outturn is expected to be slightly better if there be a good shower of rain within a month.
	Muzaffarpur...	1,941,254	1,627,000	69,700	73,290	73,200	80	90	......

	Bhagalpur ...	2,704,640	2,097,000	203,200	202,300	226,100	91	76	On account of failure of Christmas rains the outturn is expected to be less. But if there be rains within a month, the prospect may improve.
	Purnea ...	3,196,513	1,639,800	22,000	22,000	22,000	85	80	The outturn in the Sadar and Kishenganj subdivisions is not expected to be good owing to the want of moisture in the soil. A full crop is anticipated in Araria subdivision.
	Malda ...	1,216,000	675,800	60,000	70,000	76,400	96	100	The increase in the area sown this year is due to the fact that on account of the damage of *kalai* by the flood, which occurred at the close of the rains, a portion of the lands was afterwards sown with wheat. At present a normal outturn is expected; but if there be no rain in January and in February, the outturn will be deteriorated.
	Sonthal Parganas.	3,500,160	1,545,300	28,500	28,500	28,500	96	93	The low outturn at Pakour is due to the damage done by insects just at the growth of the crops.
Orissa ...	Cuttack ...	2,303,149	1,161,200	1,500	2,100	2,100	90	90	......
	Balasore ...	1,334,368	870,800	800	200	100	[illegible]	100	Decrease in area is due to the want of seasonable rain at the time of sowing.

	Ranchi ...	4,561,920	1,500,000	600	500	600	75	75	The increase in the area sown is due to sufficient moisture at the time of sowing. The figures in columns 5 and 6 have been revised.
	Palamau ...	3,139,200	687,600	14,700	14,700	18,000	60	85	The late rains were favourable to extend sowings; but the outturn has been lessened by the absence of any winter rains.
	Manbhum ...	2,654,080	1,419,200	5,000	4,500	3,700	90	80	The decrease in the area sown and in the outturn is due to want of seasonable rainfall.
	Singhbhum ...	2,494,080	838,800	8,000	2,600	3,000	90	90	The short outturn is due to want of rainfall in November and December.

LIBERALITY OF RANI HEMANTA KUMARI DEVI OF PUTEA IN THE DISTRICT OF RAJSHAHI.

Extract from a letter from A. EARLE, ESQ., I.C.S., *Secretary to the Government of Bengal, General Department, No. 657, to the Director of Public Instruction, Bengal, dated the 10th Februury 1904.*

1. I am directed to acknowledge the receipt of your letter No. 1083, dated the 26th January 1904, in which you report that Rani Hemanta Kumari Davi, of Putea, in the district of Rajshahi, has offered to pay Rs. 1,600 (one thousand six hundred) annually for the establishment of a Sanskrit class, in connection with the Rajshahi College, for teaching Vedanta, Smriti, and Nyaya. It is stated that the Rani has further undertaken to erect, at her own cost, a suitable building for the proposed class, and is also willing to create three scholarships of the value of Rs. 5 each per mensem, for the encouragement of pupils joining the class.

2. In reply, I am to say that the Lieutenant-Governor accepts the offer of Rani Hemanta Kumari Davi, and desires that the thanks of Government may be conveyed to her for her liberality. The Lieutenant-Governor accepts your recommendation that the proposed class should be called after the Rani's name, and that the Committee of Management should be constituted in the manner proposed by her.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⌂, dew.

* The anemograph being under repair, the wind movement on any day from 9th to 13th February 1904 is given from a dial anemometer from 4 P.M. of the preceding day to 4 P.M. of that day.

PRELIMINARY FORECAST OF THE OIL-SEED CROPS OF BENGAL, 1903-1904.

THE following note is published for general information.

A. EARLE,

Secy. to the Govt. of Bengal.

The 16th February 1904.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

Preliminary Forecast of the Oil-seed Crops of Bengal, 1903-1904.

Explanatory.—This forecast furnishes preliminary estimates of the area and outturn of the different kinds of oil-seeds, both *bhadoi* and *rabi*, grown in these Provinces.

The chief oil-seed crops of the Province are mustard (white and brown), rape, sesamum (*til*), linseed, castor, niger

oil-seed (*sirguja*), and eruca sativa (*táràmani*). Mustard and rape, which are not as yet distinguished in the returns, occupy about 50 per cent. of the total area under oil-seeds; linseed occupies about 25 per cent., and the remaining area is occupied by the other oil-seed crops. The bulk of the mustard and rape is cultivated in the districts of the Rajshahi Division, also in Mymensingh, Dacca, Purnea and the Sonthal Parganas. Linseed is grown chiefly in Darbhanga, Saran, Champaran, Gaya and Nadia. *Til* or gingelly is grown principally in Jessore, Bogra, Pabna, Dacca, Mymensingh, Backergunge, Tippera, Noakhali, Midnapore, Gaya, Angul, Hazaribagh and Palamau.

2. *Character of the Season.*—The season has been generally favourable to all the oil-seed crops, except *bhadoi til.* The *bhadoi* castor does not require a heavy rainfall to support it. The *rabi* oil-seeds were all benefited by the moisture in the ground due to late heavy rainfall in October. In November, light showers were obtained in most districts, except in those of the Patna and Bhagalpur Divisions. In December, there was practically no rain; but the light January showers obtained in Bihar, parts of North Bengal and in Chota Nagpur, helped the oil-seed crops and *rabi* crops generally.

3. *Area sown.*—Since the publication of the final forecast of the oil-seed crops of 1902-1903, the District Officers of the 24-Parganas, Mymensingh, Tippera and Ranchi have submitted revised figures for normal area. The total normal area under different oil-seed crops in the whole Province is now estimated at 3,854,600 acres. The area actually sown this year is returned at 3,824,400 against 3,657,700 acres estimated to have been sown last year.

4. *Character of the Crop.*—As will appear from district returns appended to this forecast, seven districts, viz., Birbhum, Darjeeling, Pabna, Dacca, Purnea, Malda and Gaya, have reported a normal crop; twenty districts, a 90 to 99 per cent. crop; ten districts, an 80 to 89 per cent. crop; seven districts, a 70 to 79 per cent. crop; and Nadia, a 58 per cent. crop. According to the district estimates, the outturn of the Province, as a whole, amounts to 90 per cent. of an average crop. But as sufficient allowance has not been made in many districts for the favourable nature of the season and the benefit derived from the January showers, I estimate the general outturn at 94 per cent., *i.e.*, at 15 annas of a normal crop.

REPORT ON THE STATE OF THE SALT MARKET FOR THE THIRD QUARTER OF 1903-1904.

No. 1544B., dated Calcutta, the 16th February 1904.

From—J. H. KERR, Esq., Offg. Secretary to the Board of Revenue, L. P.,

To—The Secretary to the Government of Bengal, Financial Department.

Member in charge:
THE HON'BLE MR. C. E. BUCKLAND, C.I.E.

I AM directed to submit the following report on the state of the salt market for the third quarter of the year 1903-1904, comprising the months of October, November and December 1903.

2. The quantity of salt of every description cleared during the quarter amounted to 28,77,591 maunds, as compared with 26,60,661 maunds in the previous quarter, and 24,55,789 maunds in the corresponding quarter of the previous year. The net amount of duty levied thereon was Rs. 55,61,795, as against Rs. 50,90,021 in the previous quarter, and Rs. 57,66,640 in the corresponding quarter of the previous year.

3. The subjoined Table (I) shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter, as compared with the figures of the corresponding quarters of the two previous years:—

Compared with the corresponding quarter of the previous year, there was an increase both in the importations and clearances; in comparison with the same quarter of 1901-1902, there was a decline in the quantity imported, but an increase in the quantity cleared.

4. Table II shows the quantity of sea-imported salt remaining in the warehouses at the close of the quarter as compared with the previous four quarters:—

* Revised figures.

The stock remaining in the golas was greater than the balance of the previous quarter but was less than that of the corresponding quarter of the previous year.

5. The despatches of salt from Calcutta by boat and by the several railways passing through the different pass-stations into the interior of the country, both east and west of the river Hooghly, as well as the despatches by steamers and flats during the quarter and the corresponding quarters of the last two years, are shown in Table (III) below:—

6. The quantity of salt despatched during the quarter by the East Indian Railway to stations beyond Buxar amounted to 405 maunds, against 810 maunds in the previous quarter and 810 maunds in the corresponding quarter of the previous year.

7. The quantity of saltpetre salt excised in the refineries of the Lower Provinces during the quarter amounted to 2,844 maunds, as compared with 5,935 maunds in the previous quarter and 1,598 maunds in the corresponding quarter of the previous year.

8. The shipments of Liverpool salt during the quarter for the port of Calcutta, according to the published market reports, amounted to 44,121 tons. It is reported that the vessels noted in the margin are afloat for Calcutta with cargoes of salt from Hamburg. The quantity given against each ship is approximate only.

During the quarter the price of Liverpool salt remained firm, while that of Bombay *karkatch* rose and fell again. The prices of Hamburg *karkatch*, Muscat *karkatch* and Saiif crushed showed an upward tendency, while those of Aden and Rawayah crushed rose towards the close of the quarter. The average price per 100 maunds of Madras salt was Rs. 56-10-3.

10. The following Table (V) shows the quantity of sea-imported salt admitted into bond and cleared from bond and shipboard at the several outports and inland warehousing stations:—

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM FOR THE MONTH OF JANUARY 1904.

WEATHER in Bengal during January was more continuously settled than is usual even in the most settled season of the year. Rainfall was almost nil in the southern districts, and towards the north, where showers were more general, the average fall for the month was largely in defect. In Bihar the fall was less than half, and in North Bengal less than a third of the normal amount. Judged, therefore, by the absence of rainfall and cloud, weather was exceptionally fine.

But while according to ordinary standards weather was fine and settled, there have been peculiarities which show that the abnormal conditions which have been prevalent for the past year or two have not yet passed away. One of these peculiarities is the absence of the ordinary cold-weather disturbance, connected usually with a shallow depression, which crosses India from the west, and in the course of its eastward movement causes cloudy, and less frequently showery, weather in Bengal. There was no such disturbance in January.

On the other hand, early in January the weather in Bengal was still to a certain extent influenced by disturbances which developed in the south of the Bay and caused heavy rainfall in Madras. Rainfall in the early days of the month extended northwards along the west coast, and a few light showers fell in Orissa and Lower Bengal, while cloud was more or less general in Bengal and in places heavy.

For some days pressure continued low in Bengal, temperature was generally high in connection with exceptionally high temperature for the season in Central India, and winds were light and irregular.

Then a rapid change occurred over Northern India. Pressure began to rise on the 6th in the extreme north-west, and extending south-eastward caused a steep gradient from north to south over the Bay on the 8th. With that arrangement of pressure northerly winds strengthened; the high temperature, which had been a marked feature in Central India and the western districts of Bengal for some days, was forced southward, and weather of a marked cold-season type became general. In some of the western districts mean temperature was 6° below the normal.

The cool weather which followed the change described above continued for about a week.

The first cold-season disturbance then commenced in the north-west, but it broke up or moved along the region of the Himalayas, and the unsettled weather was almost entirely in the northern districts.

The greater part of the rainfall in January occurred with that disturbance between the 18th and 20th. The showers were fairly general in Bihar on the 18th and 19th, and a few scattered showers fell in Chota Nagpur on the same days. Scattered rain fell in North Bengal on the 19th and 20th.

Following this disturbance the usual cold wave spread eastward over Bengal, and between the 21st and 25th fine dry cool weather prevailed. Then a series of changes began, which it is difficult to reduce to an orderly sequence of events. The low-temperature area on the 23rd included the whole of Northern India, and by the 26th high temperature was equally general, except in the Brahmaputra Valley, where it was still cool. This rapid change of temperature appears to have been due to the low pressure over the central part of the Himalayan range and the prevailing southerly winds to the south of that area.

The low pressure along the Himalayas intensified, and by the 28th defect varied from ·1 to ·15 inch. This defect almost disappeared on the 29th owing to a general rapid rise.

The changes of pressure in Bengal were, during the closing days of the month, more irregular than usual, and appear to have originated in the north rather than in the west of the Province. This becomes more probable when it is observed that rain fell in the Darjeeling hills on the 27th, 28th and 29th; then the rainfall extended to other parts of North Bengal and to part of East Bengal. Then it became general over the greater part of the Province.

Usually cold-season disturbances, which cross the Province from the west and cause cloudy rainy weather, are not accompanied by thunder. The rainfall at the end of January was caused by local thunderstorms, showing that the disturbance was of an exceptional character. The peculiarity possibly arose from the disturbance having entered Northern India from Central Asia, instead of from the usual westerly direction.

The cold wave which followed the rainfall was slow in its advance over Bengal. It was not until the 2nd of February that the high readings of 6° above the normal were replaced by low readings of 8° below the normal.

Pressure.—The most noticeable occurrence as regards the pressure distribution was the very rapid rise which spread over Northern India about the end of the first week. Previous to that rise pressure was low in Bengal, and weather was being influenced from the south-west, where north-east monsoon conditions lingered. After the change well-marked cold-season conditions became general over Bengal, followed after about a week by the first cold-season depression from the west. That depression moved eastward along the line of the Himalayas, and may have led up to the low-pressure area in the central range, which was so noticeable a feature of the later days of January. Pressure changes were more

irregular than usual during the last week, and were probably due to a depression entering Northern India from Central Asia.

On an average for the month, pressure was above the normal over both the Province and the Bay, but not by large amounts.

Temperature at times differed by rather large amounts from the normal, the extreme limits being about 6° on either side of the normal. The cool weather which accompanied any increase in the strength of the northerly winds was more permanent than the high temperatures which preceded the disturbances, and, in consequence, the mean temperature for the month is below the normal, by small amounts, over the greater part of the Province.

Defect is more than 1° in Orissa, half a degree in Assam, South-West Bengal and Bihar; in other divisions excess is very slight.

Rainfall.—Showers occurred about the end of the third week, chiefly in the northern districts, and again at the end of the month. As usual in January the fall was greatest in Bihar—about ·3 inch. In North and East Bengal about half that amount fell. The other divisions were practically rainless.

The falls were heavier in Assam, more especially in the Brahmaputra Valley. Dibrugarh received more than 2 inches and Sibsagar about 1 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the month of January 1904:—

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⌓, dew; o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers; t, thunder; ∠, lightning; /, strong wind; ≡, fog.

* The anemograph being under repair, the movements of wind of 14th and 15th February 1904 are given from a dial anemometer from 4 P.M. of the preceding day to 4 P.M. of that day.

RESOLUTION ON THE SURVEY AND SETTLEMENT REPORTS FOR THE YEAR ENDING THE 30TH SEPTEMBER, 1903.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 29th February, 1904.

RESOLUTION—No. 1299.

READ—

Letter No. 558A, dated the 15th January, 1904, from the Board of Revenue, submitting, with a note, the Survey and Settlement Reports for the year ending the 30th September, 1903.

The Survey and Settlement reports for the year ending the 30th September, 1903, with their appendices, have been prepared generally in accordance with the orders of Government.

2. Survey and settlement operations were in progress during the year in eighteen districts contained in eight of the nine Divisions of this Province. The programme, which was considerably larger than in the previous year, has been generally carried out; while, in the few cases in which deficiencies occurred, the reasons given for the failures are satisfactory. The area covered by the traverse survey parties was 6,884 square miles, and was 2,713 square miles in excess of that dealt with in the previous year. Cadastral survey operations extended over 3,719 square miles, as against 3,357 square miles in the year 1901-02. A record-of-rights has now been framed in respect of 32,482 out of a total area of 151,185 square miles of British territory in the Province.

3. The Lieutenant-Governor joins with the Board in congratulating Major Crichton, Superintendent of Provincial Surveys, upon the marked

success which has attended the various measures of economy which he has introduced in the working of his Department during the year. It is noticeable that in Backergunge, where there are peculiar difficulties to contend with, the cost per square mile of traverse survey amounted to Rs. 43·6, as against Rs. 61·9 in the previous year; and that the cost of cadastral survey, with preliminary records, was Rs. 167·7, as compared with Rs. 273·3 in the year 1901-02. In Ranchi, where, owing to the poverty of the country and the people, it is specially important that the work should be done as cheaply as possible, it is very satisfactory that the traverse survey was carried out at a cost of only Rs. 28·9 per square mile, as against Rs. 60·5 in the year 1901-02; while the cost of cadastral survey and initial record-writing was only Rs. 94 per square mile. In Purnea, the cost of traverse survey was only Rs. 24·3 per square mile; and the Lieutenant-Governor notices with pleasure that the care with which the preliminary demarcation was supervised by Messrs. Pyne and Wodschow, on behalf of the Darbhanga Raj, was one of the causes which contributed to this good result.

4. In paragraph 14 of his report, the Director has stated that kanungos, and, sometimes, persons not in the employment of Government, are now being largely employed on record-writing and as Assistant Settlement Officers. He observes that the cost of the operations will, in this manner, be materially reduced; but that he fears that efficiency may be impaired. In commenting on these remarks, the Board of Revenue deprecate the prosecution of economy in the direction of cheapening the supervising agency, where there is any danger that such economy will affect the efficiency of the work. A separate communication will shortly be addressed to the Board on the subject of the subordinate agency employed; and it will suffice to say here that the Lieutenant-Governor fully concurs in the opinion thus expressed by them. The question of effecting economy in survey and settlement operations was fully discussed in the year 1902; and, in reporting to the Government of India the measures which it was proposed to take in order to attain this object, the late Lieutenant-Governor, Sir James Bourdillon, held that, in no circumstances, should expenditure be curtailed in such a way as to render the record less trustworthy than it has hitherto been. With this view Sir Andrew Fraser is in entire agreement.

5. The question of *diara* surveys, which was alluded to in paragraph 7 of the Resolution of this Government reviewing the Survey and Settlement reports for the year ending the 30th September, 1902, is still under the consideration of the Board; but, as indicated in paragraph 11 of the present Settlement report, the matter will shortly be submitted by them for decision.

6. The settlement of rents in the Damin-i-Koh Government Estate in the Sonthal Parganas was completed during the year; the result being that the rents of the last settlement were enhanced by 50 *per cent.* for the first five years, and by 62 *per cent.* for the remaining period of the new settlement. Under a declaration made by Government in the year 1823, the lands held by the Paharias, which lie within the limits of this Estate, cannot be assessed to rent without their consent; and hence no compulsion has been put upon these people to apply for settlement. The hillmen have, however, begun to realize that settlement proceedings will have the effect of protecting them from encroachments by the Sonthals; and it is satisfactory to learn that 111 Paharia villages were settled during the year on voluntary application.

7. The Lieutenant-Governor has noticed with special satisfaction the remarks, quoted below, which have been recorded by the Settlement Officer of Ranchi as to the attitude of the Mundas towards the operations which are being conducted in that district:—

"So far, the progress of the settlement appears to have aroused no unhealthy excitement amongst the Mundas of the areas dealt with, whose attitude has, on the whole, been friendly. They appear to believe that Government is making a serious effort to befriend them; and, in turn, they have willingly assisted the work in supplying free labour for cadastral survey and record-writing, and no difficulty has been found in obtaining carriers at cheap rates. This was specially the case in the Mundari *khuntkatti* area, where the people were deeply interested in the fate of the Bill which dealt with the preservation of their rights. The passing of the Chota Nagpur Tenancy (Amendment) Act, V (B.C.), of 1903, appears to have caused great satisfaction to them."

The Lieutenant-Governor has just received an address from the residents of the Ranchi district, asking that the survey and settlement operations should be extended to the whole district. The results in deciding land disputes and preventing litigation are appreciated. It is also satisfactory to observe that the inhabitants of pargana Surjapur, in Purnea, were very favourably disposed towards the operations which were undertaken there, for the purpose of settling disputes between landlords and tenants; and that the people holding lands in adjoining areas were most solicitous in their enquiries as to the time when the operations would be extended beyond the pargana referred to.

8. The statistics relating to the mutation offices established under the Land Records Maintenance Act, III (B.C.) of 1895, emphasise the conclusion, previously arrived at, that the Act has proved a failure. Schemes for the maintenance of the records in North Bihar, Orissa and Chittagong have been submitted to the Government of India, and are now under the consideration of that Government. The present Settlement report furnishes indications of improvement in the record of mutations of names in Government and Wards' Estates. In some cases, however, the work is still unsatisfactory; and the Board are requested to pay continued attention to this important subject.

9. It is satisfactory to observe, from Chapter V of the Director's report, that the settlement records and maps are now more largely utilised in general district administration. As observed by the Board, the work of maintaining boundary marks on an effectual system has only just begun; and the progress made cannot yet be profitably criticised.

10. In conclusion, the Lieutenant-Governor has much pleasure in acknowledging the services of the various officers, whose work has been brought to notice in the reports under review, and in the Board's note thereon. The thanks of Government are due to Messrs. Allen and Maddox and to Major Crichton for their efficient management of the Departments under their charge. Mr. Beatson-Bell has done admirable work in the district of Backergunge in the face of exceptional difficulties; while Messrs. McPherson, Lister, Coupland, and Taylor are specially commended for the ability and energy displayed by them in dealing with the important operations entrusted to them.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that a copy of it, with copies of the two reports, be submitted to the Government of India.

By order of the Lieutenant-Governor of Bengal,

A. EARLE,

Secretary to the Govt. of Bengal.

LIBERALITY OF BABUS RAJ NARAYAN DAS, RADHA CHARAN DAS, AND RADHA GOBIND DAS, OF BALASORE.

No. 1255Medl., dated Calcutta, the 29th February 1904.

From—L. P. SHIRRES, ESQ., Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Commissioner of the Orissa Division.

IN continuation of my letter No. 1253Medl., of this date, I am directed to convey the thanks of Government to Babu Raj Narayan Das and his nephews, Babus Radha Charan Das and Radha Gobind Das, zamindars residing at Balasore, for their liberality in making over to Government certain landed properties in the district of Midnapore, yielding an annual net income of nearly Rs. 1,000, for charitable purposes. These purposes include the maintenance of the Charitable Dispensary at Baliapal in the district of Balasore and of the female ward at the Cuttack General Hospital, and a general provision for the supply of drinking water by the excavation of tanks and the sinking of wells in the Orissa Division.

2. This letter will be published in the *Calcutta Gazette*.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 56, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. • Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⌓, dew ; ═, fog ; o, overcast.

N. B.—In the weekly abstract from 31st January to 6th February 1904 read 47 for 4 as miles recorded on the 6th February 1904 and 78·0 for 78·2 as the maximum possible number of hours of sunshine.

Hazaribagh.—Rainfall at Sadar ·34, Giridih ·13. Weather seasonable. Standing crops doing well. Sugarcane-pressing still going on. Fodder and water sufficient. Common rice sells at Sadar at 13 and at Giridih at 12½ seers per rupee.

Ranchi.—Rainfall at Sadar 0·82. Weather cloudy. Ploughing continues. Prospects of mango and *mahua* so far good. Cattle-disease reported from six thanas. Fodder and water sufficient. Common rice selling at Sadar at 14 seers per rupee.

Palamau.—Rainfall at Sadar 0·93. Weather cloudy. Rain reported throughout the district, damaging the *rabi* crops to a certain extent. Transplantation of sugarcane going on. Cattle-disease exists. Fodder available. Water scarce in places. Rice sells at 13½ seers and maize at 25½ seers per rupee at Sadar.

Manbhum.—Rainfall at Sadar 0·07. Weather seasonable. Prospects of crops good. Fodder and water sufficient. Cattle-disease reported from Manbazar and Barabazar. Common rice sells at 13 seers per rupee.

Singhbhum.—Rainfall 0·29. Harvesting of *rabi* crops continues. Common rice selling at 15½ seers per rupee. Fodder and water sufficient. Cattle-disease reported from thanas Ghatsila and Chakradharpur.

General Summary.—Light showers are reported from parts of Lower Bengal, Orissa and Chota Nagpur. Rain is needed in Murshidabad and Bhagalpur. Slight damage to *rabi* crops has been caused by locusts in Pabna and by rain in Palamau. Prospects otherwise good. Harvesting of *rabi* crops, pressing of sugarcane, and transplantation of summer rice continue. Sowing of early rice and jute has commenced in places. Cattle-disease reported from ten districts. The price of common rice has risen in eight districts, has fallen in one and is stationary in the remainder.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported for any day is for 24 hours preceding 8 A.M. of that day.

LIBERALITY OF BABU DHANPAT SINGH NOWLAKHA, OF AZIMGANJ.

No. 1551Medl., dated Calcutta, the 14th March 1904.

From—L. P. SHIRRES, ESQ., Secy. to the Govt. of Bengal, Municipal Dept.,

To—The Commissioner of the Presidency Division.

I AM directed to acknowledge the receipt of your letter No. 214G.—Medl., dated the 29th February 1904, in which you report that Babu Dhanpat Singh Nowlakha, of Azimganj, in the district of Murshidabad, has made a donation of Rs. 15,000 for the purpose of erecting a new and more suitable building for the charitable hospital and dispensary situated in that town.

2. In reply I am to request that you will be so good as to convey to the donor the thanks of the Lieutenant-Governor for his liberality and public spirit, and to ask that the necessary steps may be taken, in communication with the Inspector-General of Civil Hospitals and the Public Works Department, for the construction of the building.

3. This letter will be published in the *Calcutta Gazette*.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF FEBRUARY 1904.

THE weather at the beginning of February was characterised by the presence of a depression in South-East Bengal, which moved slowly eastward and filled up on the second of the month. It gave rise to moderately heavy rain in East Bengal and Assam. Pressure on the 1st of the month was below normal, the defect being slight in the north and increasing up to one-tenth inch in the south-east of the province. The barometer had been rising very rapidly in the wake of the depression and continued to rise up to the morning of the 3rd, when it was in excess over the province. During the 3rd a sharp reaction set in, with the effect of bringing the barometer to practically normal height on the morning of the 5th. Temperature, which on the 1st was in defect in the north and in excess in the south of the province, responded to these changes of pressure falling rapidly as the barometer rose, and though this fall was slightly checked and revised by the subsequent reaction of pressure, the temperature was below normal over almost the entire province on the morning of the 5th. From the latter date to the 12th, the barometer oscillated up and down, rising from the 5th to the 7th, falling from the 7th to the 9th, and then again rising to the 12th, but these oscillations were slow, uniform and moderate in amount, and though their amplitude above the mean height was greater than that below, its maximum was at most stations less than one-tenth of an inch. The weather during this period retained its ordinary cold-weather character, winds being for the most part very light. During the whole of this period temperature continued in more or less defect in the south of the province, while in the north there was a change from defect to excess on the 8th, the latter maintaining itself up to the 12th.

A change of weather now set in, a sharp fall of pressure amounting at most stations to more than one-tenth of an inch taking place on the 12th. This continued on the next day, and was followed by small but abrupt oscillations on the 14th and 15th. The unsettled conditions which now clearly prevailed resolved themselves into the formation of a small shallow depression at the head of the bay on the morning of the 17th. An area of low pressure continued to show itself over Bengal up to the 20th, and was accompanied by falling pressure over the province, the distribution over the Bay and land area assimilating itself to that which prevails in the hot season. Following these changes of pressure, the temperature began to rise slowly, the area of excess temperature gradually extending from north to south until on the morning of the 16th it practically included the whole province. On the 20th of February a rise of pressure set in and continued unchecked, though with variations of rapidity up to the 25th, the barometer on that date being greatly in excess of normal. This rise was accompanied by a reversion to the ordinary cold-weather distribution, the weather chart on the morning of the 21st showing a gradient of pressure once more from north to south. Notwithstanding the rise in the barometer, temperature, though on the 20th it showed a tendency to fall, rose rapidly on the succeeding day, and remained with slight variations in excess up to the end of the month. The pressure, it is true, began to fall on the 25th, and continued to do so up to the 29th, but the distribution shewed indications of change from the cold-weather type only on the last two days of the month. On the 29th a small recovery of pressure took place.

General Summary.—The weather of the month naturally divides itself into three periods, from the 1st to the 12th or 13th, when ordinary cold-weather conditions prevailed, the pressure being on the whole above the normal, while the temperature was abnormally low. During the middle period of the month irregular conditions arose, the tendency being to a premature establishment of a hot-weather distribution. These conditions culminated in the formation of a depression on the 17th, which dominated the character of the weather for the next few days. This depression was not of the nature of a cold-weather storm, but originated in Bengal itself, and arising as it did from local causes was, as is usual in such cases, accompanied in its progress by thunderstorms. With the exception of the rain which fell on the first two days of the month, the only precipitation which took place in February was due to the influence of this depression. The latter portion of the month was characterised by a return to the normal distribution, average pressure being high, as well as the temperature for the whole period.

Summary of pressure.—Owing to the average excess of pressure during the first and last divisions of the month mentioned above, an excess which was not counterbalanced by the defect in the middle period, the mean pressure of the month is, except for a few stations in the extreme south, above the normal. The mean excess is, however, nowhere large, its greatest value being 038 inch at Darjeeling.

Summary of temperature.—Temperature on the whole was in excess during the month. As although it was low during the first part of the month chiefly over the southern half of the province, the excess which prevailed during the second half as a rule more than counterbalanced this, and, moreover, extended over the whole province. There is consequently an excess of mean average temperature over the whole province with the exception of a few stations in the extreme south. The same holds good of the mean maximum temperature. In the case of the mean minimum temperature, on the other hand, the province is divided

into two nearly equal portions by the line of no variations. The greatest excess of maximum temperature is 3°·8 at Bhagalpur and the greatest defect 3° 4 at Chaibassa. The greatest excess in mean temperature is 2°·8 at Rampur Boalia.

Summary of rainfall.—Apart from that in the first two days of the month, the whole rainfall was contained within the period from the 10th to the 20th. Rain was heaviest in North and East Bengal and lightest in Orissa and Bihar. The two former Dvisions received about one-third more than the average, while in the two latter only about half the ordinary amount of rain fell In South-West Bengal and Chota Nagpur, the total quantity of rainfall was nearly normal.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the month of February 1904:—

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

THE BRUCE INSITITUTION.

NOTIFICATION.

No. 1794, dated the 22nd March 1904.—The following is published for general information.

A. EARLE,
Secy. to the Govt. of Bengal.

REPORT OF THE BRUCE INSTITUTION

FOR THE YEAR 1903.

I.—*Control.*—During the year under review, the Very Rev. Father V. Marchal, S.J., whose term of office had expired, was re-appointed to be a Governor, but towards the close of the year he resigned his appointment, and was succeeded by the Rev. Father A. Van de Mergel, S.J. Mr. H. A. Bamford was absent from India for a period of eight months, and in consequence ceased to be

a Governor under Rule 8. He was succeeded by Mr. W. W. Hornell (Inspector of European Schools, Bengal). Mr. A. Pedler, (Honorary Secretary), was absent from India for a period of three months, during which period Mr. A. C. Edwards acted for him.

The following is a list of the Governors at the close of the year:—

The Hon'ble the Chief Justice of Bengal ... ... } *Ex-officio.*
The Most Rev. the Lord Bishop of Calcutta ... ... }
The Inspector-General of Civil Hospitals, Bengal ... ... }
The Chairman of the Calcutta Municipality ... ... }
The Director of Public Instruction, Bengal (Honorary Secretary) }
The Hon'ble Mr. Justice Sale.
The Hon'ble Mr. L. P. Pugh (Barrister-at-law).
The Ven'ble Archdeacon Kitchin.
The Rev. J. E. Robinson, D.D.
The Rev. Father A. Van de Mergel, S.J.
Geo. Roddick, Esq.
W. W. Hornell, Esq.

II.—*Capital and Income.*—The capital of the Institution stood, as in the previous year, at Rs. 10,51,200, of which Rs. 10,46,200 is held by the Comptroller-General in the form of a $3\frac{1}{2}$ per cent. stock certificate of the year 1865, and the balance, Rs. 5,000 is invested in $3\frac{1}{2}$ per cent. Government securities of the year 1879, and is held by the Secretary and Treasurer, Bank of Bengal. The annual interest on the capital amounts to Rs. 36,792, which is placed to the credit of the Institution in the Bank of Bengal. The year opened with a balance of Rs. 17,681-1-0 and closed with a balance of Rs. 17,834-10-3.

III.—*Election, Vacancies, etc.*—The annual election was held in the month of January. For the 13 vacancies advertised, 50 applications were received, and 13 girls were elected on the recommendation of a Sub-Committee consisting of the Ven'ble the Archdeacon Kitchin, the Very Rev. Father V. Marchal, S.J., the Rev. J. E. Robinson, D.D., and Geo. Roddick, Esq. Of the girls elected, two were placed in the Loretto Boarding School, Entally, five in the Loretto Orphanage, Entally, four in the Calcutta Girls' School, one in the Pratt Memorial School, and one in St. Paul's Mission Home. Of the girls who had been withdrawn, fifteen had attained the age of seventeen years, the limit ordinarily allowed under the rules. One girl was removed from the foundation for unsatisfactory conduct, while two other girls were warned that if their conduct did not improve, they would be liable to be removed from the benefits of the Fund. Another girl was removed for continued absence without leave. Two girls, who had been ailing, were permitted to go to the hills for a change, but no charges beyond the usual school-fees were paid. There were two deaths.

At the close of the year there were 133 girls on the foundation, against 144 in the preceding year. They were distributed as follows:—

Loretto Convent, Entally—		
Boarding School	19	
Orphanage	30	
	—	49
Calcutta Girls' School		36
Pratt Memorial School		18
Calcutta Free School		11
La Martinière		9
St. Paul's Mission Home		5
Protestant European Orphanage, Cuttack ...		3
Old Church Parochial Home		1
St. Vincent's Home		1
Total ...		133

The following table affords particulars as to the class and religion of the foundationers at the close of the year :—

Class.	Roman Catholics.	Church of England	Non-Conformists.	Total.
1. Orphans, or deserted by the parents ...	23	11	12	46
2. Fatherless, or deserted by the father, or father incapable.	28	36	17	81
3. Father, or both parents alive	1	3	2	6
Total ...	52	50	31	133

IV.—*Education and Maintenance.*—The nature of the education imparted to the girls on the foundation is generally that prescribed for primary and middle schools for Europeans. In exceptional cases a higher education is given. Parents and guardians are allowed to choose any school for the education of their children or wards, who may be elected, provided that such a school has already been approved by Government as suitable for the education and maintenance of Bruce foundationers. A girl is not ordinarily allowed to remain in school after she has attained the age of seventeen years, when an outfit grant of Rs. 50 is usually given to enable her to start in life. If, however, a girl elects to take up teaching as a profession, some extension of time is generally allowed, if the Governors consider her fit to take up higher studies. Short extensions, not exceeding over a few months, are also generally allowed to enable the foundationers to appear at the examinations held under the Code of Regulations for European Schools. Two such extensions were allowed during the year. The end sought is to fit the girls for a respectable and useful station in life.

The average monthly cost for the education and maintenance of each girl on the foundation amounted to Rs. 18-13-4, against Rs. 19-6-6, in the preceding year.

The total amount paid under the different heads of expenditure was as under :—

1902.

V.—*Inspection.*—Mr. H. A. Bamford was appointed Visiting Governor for the first-half and the Ven'ble Archdeacon Kitchin for the second-half year. Their reports were on the whole satisfactory. A few cases of idleness and disobedience were brought to the notice of the Archdeacon, and he warned these girls that if their conduct did not improve, they might lose their places on the Bruce Fund. Annual reports are also received from the school authorities, in regard to the conduct, application, progress, health, and attendance of the foundationers. These reports have generally been satisfactory.

VI.—*Meetings.*—Four meetings were held during the year, and among the various resolutions passed, the following may be noted :

That in all future applications for election on the Bruce Fund, a statement of the case should be drawn up by the minister countersigning the application, and appended thereto, and that an addition be made to the advertisement of the election to the effect that no application will be considered which is unaccompanied by such a statement.

CALCUTTA;
The 1st March 1904.

A. PEDLER,
Honorary Secretary to the Governors.

RESOLUTION ON THE OPIUM ADMINISTRATION REPORT FOR THE YEAR 1902-1903.

REVENUE DEPARTMENT -OPIUM.

Calcutta, the 24th March 1904.

RESOLUTION—No. 1935.

READ—

The Report on the Administration of the Opium Department for the year 1902-1903 (from the 1st November, 1902, to the 31st October, 1903).

1. In the Benares Agency, Mr. Baillie was in charge for about seven months, and Mr. House for about five months, of the year. They spent between them 131 days on tour, during which period the office of every division and subdivision in the Agency was inspected. Mr. Bright, who held charge of the Bihar Agency throughout the year, spent altogether 80 days on tour, and inspected two subdivisions and seven sub-agencies. The Hon'ble Mr. C. E. Buckland, C.I.E., who assumed charge of the Miscellaneous Revenue Department of the Board on the 15th December, 1902, and remained in office for the rest of the year, visited both the Agencies twice during the year.

2. The improvement in check-measurements in the Bihar Agency, which was observed last year, was maintained; and there was an increase in the percentage of the area so measured to the total cultivated area. In the Benares Agency, although results were not quite so good as in the previous year, owing to the employment of a smaller number of officers on the work, the percentage of the area test-measured was still considerably higher than in the Bihar Agency. The Lieutenant-Governor is glad to gather from the Board's report that this subject continues to receive the careful attention which it deserves.

3. In the Bihar Agency, there was a further diminution of the area which the raiyats engaged to cultivate. This decrease was general in all the sub-agencies, except Tirhut, and is generally ascribed to the competition of more lucrative crops. It was observed last year that the decrease in the area settled in the Benares Agency in the year 1900-1901 had been, to some extent, made good. In the year under review, however, there was a further decline under this head, owing chiefly to the relinquishment of cultivation of doubtful character in the Sitapur Division.

4. It is satisfactory to notice that the desirability of securing the personal attendance of cultivators at settlement time was steadily kept in view both by the Agents and the Board. Progress, however, is slow in the Bihar Agency, where the great majority of the raiyats still prefer to take their advances through the *khatadars*, or middlemen.

5. In both Agencies the season was, on the whole, an exceptionally good one. As compared with the averages for the preceding seven years, the average outturn per bigha showed an increase of 15 *chitaks* in the Bihar Agency, and of 1 seer, 12 *chitaks* in Benares. The Lieutenant-Governor is pleased to notice that there was a further large increase in the amount of money advanced in both Agencies for the construction and repair of wells; the figures for the Benares Agency exceeding all previous records, including even those of the famine year of 1896-97. The Board are requested to consider whether rules on the subject of these advances, similar to those which have produced such excellent results in Benares, could not be introduced in certain of the sub-agencies in Bihar where the system is not yet popular.

6. The average consistence of the opium received at the Patna and Ghazipur Factories was 73·80° and 70·72°, as against 75·08° and 71·75°, respectively, in the previous year. The low consistence did not, however, interfere with the process of manufacture. Owing to the unusually large outturn of the drug during the year under review, the expenditure shewed an increase of over 20½ lakhs in Bihar and of over 58 lakhs in Benares. For the same reason, the average cost price of opium per maund in both the Agencies was much less than in the preceding year.

7. During the twelve months from November, 1902, to October, 1903, 48,000 chests of provision opium were sold in equal proportions from the two Agencies. As compared with the results of the preceding 12 months, the average sale prices of Bihar and Benares opium shewed an increase of Rs. 100 and Rs. 104, respectively, per chest, owing chiefly to the rise in the exchange value of silver and to an increased demand for Bengal opium in China, Saigon, Batavia, Bangkok, Manilla and Formosa. The total outturn of provision opium during the year 1902-1903 was 64,739 chests. It is expected that there will be a reserve of 31,764 chests on the 1st January, 1905.

8. During the year under review, several administrative changes were introduced in the Opium Department. The most important of these was the abolition, in the Benares Agency, of the system of remunerating the *lambardars*, or middlemen, by the primitive system known as *khurchan* (scrapings), and the introduction, in its place, of a method of payment by a commission of 2½ *per cent.* on the value of the opium received from the cultivators. In future, the two appointments of Factory Superintendent at Ghazipur and Patna, which have hitherto been reserved solely for officers of the Indian Medical Service, will be open to, and will ordinarily be held by, qualified officers of the Opium Department. Also, the prospects of the Assistant Factory Superintendents, and of the Factory Assistants, have been improved. Finally, a concession has been made in favour of Sub-Deputy Opium Agents. Under the orders previously existing, a Sub-Deputy Opium Agent could not be promoted to the grade of Rs. 700 until he had completed 24 years' approved service in the Department, even if there was a vacancy in that grade. It has now been decided that promotions to that grade may be permitted whenever vacancies occur, even if the officers concerned have not completed 24 years' service, provided that they are otherwise eligible.

9. The Lieutenant-Governor is glad to observe that fair progress has been made in the work of revising the Opium Manuals, and hopes that their publication will not now be long delayed. A report has recently been received from the Director of Land Records on the subject of the utilisation by the Opium Department of survey maps and records in connection with opium settlements. This is now under the consideration of Government. The irregularities in the Chest and Saw-mill Department of the Patna Factory, referred to in paragraph 35 (*h*) of the Board's report, will shortly form the subject of a special communication to the Government of India.

10. The Lieutenant-Governor desires to thank the Board for their efficient administration of the Department during the year under review. His Honour joins with them in their appreciation of the valuable services rendered, during the last five years, by Mr. Baillie, late Opium Agent, Benares, who has now left the Department for good.

By order of the Lieutenant-Governor of Bengal,

A. EARLE,

Secy. to the Govt. of Bengal.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard, Newman's No. 8d, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⌓, dew; o, overcast.

The total fall from 1st January to 2nd April 1904	5·20
The average fall of the corresponding period for 24 years, Surveyor-General's Office	2·81

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⌓, dew.

RABI CROPS IN BENGAL, 1903-1904.

THE following note is published for general information.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

Forecast of the Rabi Crops of Bengal for 1903-1904.

Explanatory.—This forecast furnishes estimates of the area and outturn of the *rabi* crops, with the exception of wheat, cotton, oilseeds, and sugarcane, for which separate forecasts are issued. The crops included in this forecast are summer rice, barley, gram, tobacco, poppy, and other food and non-food crops which are harvested between February

and April. These latter embrace the important pulses, *rahar*, *kalai*, *mung*, peas, lentils, *khesari*, and *kurti*, also buck-wheat, *cheena*, potatoes, yams, melons, *chillies* and other spices, as well as oats and *rabi* vegetable crops.

2. *The character of the season.*—The heavy October rains favoured the retention of moisture by the soil for the *rabi* crops. In November light showers were obtained all over the Province except in Bihar, where, however, the bulk of the *rabi* crops is raised. In December there was hardly any rain. The crops in Bihar were much benefited by the January rains. Light showers were also obtained in January in Chota Nagpur and North Bengal. In February the rainfall was more copious and general. On the whole, therefore, the season was favourable for the growth of crops.

3. *Area sown.*—Excluding the areas under wheat, oil-seeds, cotton, and sugarcane, the normal area sown with the various *rabi* crops in the Province amounts to, according to the District Returns, which are summarised in Appendix I, 10,053,300 as against 10,071,800 acres, which was the normal area shown last year. The change is due to the revision of estimates of normal area under the crops under report by the District Officers of Midnapore, Pabna, Tippera, Darbhanga, Bhagalpur, and Ranchi. The area actually sown this year is estimated at 9,606,200 against 9,242,200 acres sown last year.

4. *Outturn.*—From Appendix I it will be seen that Darjeeling and the Sonthal Parganas expect a crop of over 100 per cent. Six districts, viz., Rajshahi, Rungpur, Backergunge, Pabna, Gaya, and Malda expect 100 per cent. crop. In thirteen districts the estimates vary from 90 to 99 per cent., and in twelve others between 80 and 89 per cent. Eleven districts anticipate a crop between 60 to 79 per cent., while Jalpaiguri expects an outturn of 51 per cent.

According to the estimate of the District Officers, the outturn for the Province, as a whole, amounts to only 87 per cent. of a normal crop as against 86 per cent., which was their estimate for last year. Considering, however, the favourable conditions that generally prevailed this year for *rabi* crops and specially for the summer rice, I would raise the general estimate to 90 per cent., and the estimate in the case of summer rice to 95 per cent.

5. *Gross outturn of summer rice.*—As shown in Appendix II the gross yield of summer rice for the Province may be put down at 2,923,800 cwt. as against 3,283,300 cwt. of last year.

CALCUTTA,
The 30th March 1904.

Murshidabad	1,371,520	985,500	Barley	55,000	64,900	60,600	99	79	The decrease in the area sown is reported to be due to the floods of October last, which prevented a large area from being sown. The decrease in the outturn is reported to be due to want of rainfall. I have been over most of the district on tour and find everywhere a large area sown in *rabi*, as winter rice could not be sown in many places owing to lateness of rains. The *rabi* crops in the north are the best I have ever seen, and are admitted by the raiyats to be very good, and in other places the crop is at least average to good. I send the returns for what they are worth.

General Summary.—Rain is reported from the greater part of Bengal Proper, from six districts in Bihar, from the district of Balasore and also from all the districts in Chota Nagpur. The fall was heavy in East and South Bengal; elsewhere light. The recent rain has generally facilitated the agricultural operations, but the excessive fall in the districts of the Chittagong Division has caused some damage to the *rabi* crops there. Cultivation of land is being vigorously pushed on. Sowing of paddy and jute in progress. Prospects generally good. Cattle-disease reported from ten districts. The price of common rice has risen in seven districts, fallen in six, and is stationary in the remainder.

The highest temperature in the month	100 0	28th	
The lowest temperature in the month	61·9	12th	
The range of temperature during the month	38·1		
The mean daily range of temperature	22·6		
The greatest range of temperature in one day	30·1	28th	
	Per cent.		
The mean humidity of the month	68		
The average humidity of March from 19 years' registers ...	66		
	Inches.		
The mean vapour tension of the month	0·651		
The average vapour tension of March from 19 years' registers...	0·634		
The mean cloud proportion of the month	1·06		
The average cloud proportion of March from 27 years' registers	2·21		
	Inches.		
The total rainfall of the month	2·62		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	2·38		
The average fall of March from 23 years' registers ...	1·14		
The greatest fall in 24 hours	1·50	10th	
	Days.		
The number of rainy days in the month	4		
The average number of rainy days in March from 23 years' registers	2		
	°		
The mean maximum equilibrium temperature of solar radiation during the month	145·6		
The mean difference of sun and air temperatures	53·6		
The greatest sun temperature	151·5	28th	
The greatest excess of sun over air temperature	60·5	3rd	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	65·1		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	4·3		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	6·8	28th	
	Miles.		
The mean movement of the wind per day	79·3		
The greatest movement of the wind in one day	205·0	9th	
The greatest movement of the wind in one hour	28·0	7th 5 to 6 P.M.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, gloomy; p, passing temporary showers; t, thunder; ∠, lightning, ↗, strongwind.

RESOLUTION ON THE HOWRAH BRIDGE BUDGET ESTIMATE FOR THE YEAR 1904-1905.

No. 676 Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 14th April 1904.

RESOLUTION.

Howrah Bridge Budget Estimate for the year 1904-1905.

READ—

Letter No. 7735 of the 26th March 1904, from the Vice-Chairman of the Commissioners of the Port of Calcutta, forwarding the Budget Estimate of the Howrah Bridge for the year 1904-1905.

RECEIPTS.

The total receipts for 1904-1905 have been estimated at Rs. 1,64,125, against Rs. 1,70,750 of the previous year, showing a decrease of Rs. 6,625. The decrease is chiefly due to a reduction on account of interest owing to Rs. 3¼ lakhs having been withdrawn from the Reserve Fund for the purchase of two

new ferry boats. The receipts from Railway Traffic have been estimated at almost the same sum as last year. Although the total receipts are less than those of the year 1903-1904, the financial position of the fund has been improved, as the estimated deficit will be only Rs. 8,500, against the deficit of Rs. 28,250 of the preceding year.

EXPENDITURE.

2. The expenditure has been estimated at Rs. 1,72,625, against Rs. 1,99,000 for the year 1903-1904, showing a decrease of Rs. 26,375. The largest item of decrease in the expenditure is under the head "Miscellaneous," under which head a sum of Rs. 54,000 was provided for in the Budget last year for the hire of steamers for conducting the ferry service. During the year under review no such provision is necessary.

3. As compared with the receipts that have been estimated for (Rs. 1,64,125), there will be a deficit of Rs. 8,500, and this amount will be met from the Reserve Fund of the Bridge.

4. The Lieutenant-Governor sanctions the estimate under section 21 of Act IX (B. C.) of 1871.

By order of the Lieutenant-Governor of Bengal,

D. B. HORN,

Secy. to the Govt. of Bengal.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF MARCH 1904.

PRESSURE was slightly below normal on the 1st of the month over the province, while temperature was in general excess, and fine calm weather with westerly winds prevailed. During the first three days of the month pressure fell steadily but slowly. A small disturbance was apparently affecting the weather during this time and was accompanied by a slight fall in day temperatures. On the 4th pressure began to rise, and though the rise was slightly checked on the 5th and 6th it continued with greater rapidity on the 7th and 8th, the pressure on the latter date being in moderate excess throughout. On the latter date a sharp fall set in which continued till the 10th. During the whole of this period the area of lowest pressure lay over the north of Bengal, and owing to the irregular and somewhat cyclonic circulation of winds to which it gave rise, the weather was feebly disturbed and numerous thunderstorms were experienced over the province. Though temperature varied irregularly during this disturbed period, mean temperature remained generally in excess chiefly owing to abnormally high night temperatures. From the 11th to the 15th only slight oscillations of pressure took place, but the distribution changed its character and seemed to indicate the passing of a feeble disturbance from the province into the bay. Owing to the variable direction of the winds, the weather continued somewhat unsettled and showery over the province. On the 15th, however, the distribution had reverted again to the ordinary hot-weather character and weather was generally fine. With the dry north winds which accompanied the passage of the area of low pressure southwards on the 11th, a sharp fall of temperature set in, and although with the reversion of winds to the south on the 15th a reaction set in, mean temperature remained below normal up to the 16th of March. Pressure continued to oscillate steadily and uniformly between comparatively small limits during the remainder of the month, the period of a complete oscillation never exceeding four days. The deviation from the normal was consequently never very great, and as the motion was slow, the character of the weather was very settled till the end of the month. The extent and period of the oscillations will be indicated by stating that pressure which was below normal on the 16th fell on that date, rose on the 17th and 18th, was steady on the 19th, rose on the 20th and 21st, fell on the 22nd, was steady on the 23rd, rose on the 24th, was steady on the 25th, fell on the 26th and 27th, rose on the 28th and remained nearly steady during the last three days of the month, when it was almost normal. The distribution of pressure was practically that of the hot weather and remained unchanged during this period, with highest pressure in the south and the lowest over the province. Winds blew steadily from the south-west over the southern half of the province and were generally light. Only on the 24th, 25th and 26th was there a deviation from this steady direction of the winds owing to the formation of a diffused depression over Bengal. With the setting in of the southerly winds on the 16th temperature began steadily to rise. It oscillated slightly between the 19th and 23rd, but with this exception temperature remained above the normal with a general upward tendency till the end of the month. On the 31st of March mean temperature was everywhere in excess, the excess amounting to as much as 7° at Malda.

General Summary of Weather.—During the first-half of the month weather was feebly unsettled, small and shallow areas of depression passing over Bengal in different directions during that period. The distribution of pressure was undergoing a change from the 1st to the 15th, and the change was naturally accompanied by irregular winds and the usual concomitant thundershowers. During the latter-half of the month, on the other hand, the circulation of winds was steady and of the usual hot-weather character. As, moreover, the gradient at the head of the Bay was not sufficiently strong to produce a strong indraught of wind, and as, moreover, the distribution was such that the winds were from the south-west and not from the south-east, and consequently not surcharged with moisture, the conditions for the usual nor'wester thunderstorms, which are prevalent at a slightly later period, were wanting, and the weather during the latter half of the month was fine and settled.

Summary of Pressure.—Pressure during the whole of the month was characterised by uniform "surges." This was especially the case during the latterhalf of the month, but even during the first half, although slight local depressions existed, they were exceedingly shallow and consequently did not markedly affect the general rise and fall of the barometer common to the whole area. As the amplitudes of the various oscillations on each side of the mean were fairly equal, the average pressure of the month differed from the normal nowhere to any great extent, with the result that there was a very slight and almost uniform defect of mean pressure below the normal over the whole of Bengal.

Summary of Temperature.—As will be seen from the account of the weather from day to day, temperature was very seldom below the normal, the general tendency being upward except for the periods from the 11th to the 15th and from the 19th to the 23rd of the month. Mean temperature is consequently above the average for the month except in Chota Nagpur. The greatest excess was in East Bengal and the least in South-West Bengal. The maximum excess was 2·7° at Faridpur. Mean maximum was likewise above normal over almost the whole province, the exception being again Chota Nagpur and a small part of

South Bihar. In the case of mean minimum temperature the deviation from the normal is more irregular and likewise generally of less amount, the greatest excess being 2° at Noakhali and the greatest defect 2°·7 at Hazaribagh.

Summary of Rainfall.—Rainfall was on the whole scanty during the month except in Chota Nagpur. The chief rainfall occurred during the distribution period at the beginning of the month. Chota Nagpur was the first area to come under the influence of the unsettled weather, slight showers having been received there as early as the 1st, but general rain did not commence in that quarter till the 3rd, on which date Bihar also came within the influence of the disturbance. The unsettled weather then gradually extended eastwards, its effects being felt as late as the 19th in East Bengal. Slight showers were also received in Orissa and Ranchi between the 23rd and 25th. Taking the whole month, East and North Bengal received considerably below their normal amounts, while in South-West Bengal the rainfall was practically average. In Orissa and Bihar the defects were slight.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the month of March 1904:—

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye-observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

NOTIFICATION.

No. 176T.G.—The 19th April 1904.—The following is published for general information.

A. EARLE,
Secy. to the Govt. of Bengal.

Extract from a letter from A. EARLE, ESQ., I.C.S., *Secretary to the Government of Bengal, General Department, to the Director of Public Instruction, Bengal, No. 174T.G., dated Darjeeling, the 19th April 1904.*

I AM directed to acknowledge the receipt of your letter No. 4072, dated the 25th March 1904, in which you report that, in order to perpetuate the memory of Mr. B. De, late Magistrate and Collector of Balasore, some of the leading gentlemen of Balasore have offered to invest the sum of Rs. 1,100 in 3½ per cent. Government securities for the creation of a Trust Fund to be called the "B. De Fund," the interest of which will be spent in awarding a scholarship of Rs. 4 a month, tenable for three years at the Balasore Zilla School, to the student attending any of the schools of that district, who stands first in the examination for Middle English Scholarships.

2. In reply, I am to say that Government is pleased to accept the offer, and desires that its thanks may be conveyed to the "B. De Memorial Committee" for their liberality.

APPOINTMENT OF A COMMITTEE TO REPORT ON THE WORKING OF THE EXISTING SEPTIC TANK INSTALLATIONS IN BENGAL.

MUNICIPAL DEPARTMENT—MUNICIPAL.

Darjeeling, the 20th April 1904.

RESOLUTION—No. 236T.—M.

READ—

Letter to the Government of India, Home Department, No. 867T.—M., dated 29th May 1903.

Letter from the Sanitary Commissioner, Bengal, No. 3216D., dated the 14th October 1903.

Memorial from certain inhabitants of Rishra, etc., in the Serampore Municipality, dated the 18th January 1904, complaining of the pollution of the river Hooghly by the effluent from septic tanks.

Letter No. 62M, dated 25th January 1904, from the Commissioner of the Burdwan Division.

Questions and answers at the meeting of the Bengal Legislative Council of 2nd February 1904, on the subject of septic tanks.

Letter to the Sanitary Board, No. 721M., dated 9th February 1904.

Letter No. 306S.B., dated 22nd March 1904, from the Secretary to the Sanitary Board, with enclosures.

In the letter to the Government of India cited above it was stated that the Lieutenant-Governor, after reviewing all the evidence before him, entertained no doubt that the conversion of crude sewage into an odourless and non-putrescible fluid can be accomplished under proper conditions, and that this is a most valuable and useful result. It was noted, however, that further experiments were necessary to determine the amount of work which could be done by a septic tank under different conditions, the quantities of water required, the efficacy of the effluent as liquid manure and other details. His Honour therefore determined to proceed further with the experiments, and accorded sanction to the construction of a septic tank by the Muzaffarpur Municipality.

2. Meanwhile the increase in the number of septic tanks in the mills on the banks of the Hooghly, which has been very rapid, has rendered it necessary that the conditions on which such installations can be permitted shall be determined without delay. That the system when successfully worked constitutes a great advance in the application of scientific sanitary methods the Lieutenant-Governor has no doubt. Unfortunately this result has not yet been fully attained; and objections, to some extent well founded, have been raised to the discharge of the filtrate or effluent into the river. It is a matter of urgent necessity, therefore, that a speedy solution of the problem should be arrived at, in order on the one hand that the large expenditure incurred by the mill-owners may not be thrown away, and on the other that the objections referred to may as far as possible be removed.

3. The question is also of more than local importance; for if these installations can be made to perform all that has been claimed for them, they will no doubt be adopted in all the large Municipalities in the Province, and will remove what has hitherto been one of the greatest difficulties of municipal administration For this reason also Sir Andrew Fraser has given the whole subject his most careful consideration.

4. The Sanitary Board, who were consulted, have represented that they are unable to advise until orders are passed on the following points raised by the Committee of the Jute Mills Association, viz.—

(1) What is the distance above and below Palta and Serampore within which the discharge of the filtrates from septic tank installations without further treatment will not be permitted?

(2) Will Government be satisfied if the filtrates are passed through sand before being passed into the Hooghly?

(3) What is the standard of purity on which Government will insist?

5. In order that the questions referred by the Sanitary Board may be fully enquired into, and also in order that the best methods of dealing with the whole problem may be ascertained, His Honour has been pleased to appoint the following Committee to report on the working of the existing septic tank installations in Bengal, and on the means which should be adopted to render the system efficient and free from objection :—

Colonel S. H. Browne, C.I.E.	*President.*
The Hon'ble Mr. D. B. Horn	*Members.*
Major F. C. Clarkson, I.M.S.	
The Hon'ble Mr. L. P. Shirres, I.C.S., Secretary to the Government of Bengal in the Municipal Department	*Secretary.*

6. In addition to dealing with the three specific questions set forth above, it will be the duty of the Committee in the first instance to ascertain the actual facts as to the existing installations. In this connection they will have to consider carefully the construction and situation of the structures, and the character, chemical and otherwise, of the effluent which is discharged. It will also be their duty to examine the different methods by which the effluent can be disposed of. Three methods are referred to by the Sanitary Board, namely, (*a*) by turning the filtrates over land, (*b*) by using them as feed water for the boilers, and (*c*) by discharge into the river after filtration through sand. The second of these ways, which is said to be in use in America, would if it could be adopted apparently solve the problem in the case of the Hooghly Mills. If discharge into the river is permitted, the Committee should report the conditions which they consider necessary in order that this may be done without detriment to the public health. Lastly, the Committee should advise what changes require to be made in the existing installations and in their methods of working, so that the best results may be obtained.

ORDER—Ordered that a copy of this Resolution be published in the *Calcutta Gazette*, and that copies, together with copies of the papers read in the preamble, be forwarded to the President and Members of the Committee for information.

By order of the Lieutenant-Governor of Bengal,

L. P. SHIRRES,

Secy. to the Govt. of Bengal.

RESOLUTION ON THE BUDGET ESTIMATE OF THE COMMISSIONERS OF THE PORT OF CALCUTTA FOR THE YEAR 1904-1905.

No. 686Marine.

Government of Bengal.

MARINE DEPARTMENT.

Calcutta, the 18th April 1904.

RESOLUTION.

READ—

Letter No. 7734, dated 26th March 1904, from the Vice-Chairman of the Commissioners of the Port of Calcutta, submitting for sanction the Budget estimate of the Commissioners for the year 1904-1905.

REVENUE ACCOUNT.

1. A general summary of the estimates submitted by the Commissioners is given below:—

Income.

	Estimate for 1904-1905. Rs.
I.—Control	20,400
II.—Jetties	10,05,200
III.—Tea Warehouse	1,08,400
IV.—Petroleum wharf	2,80,800
V.—Inland vessels' wharves	4,07,740
VI.—Rentable lands and buildings	6,86,000
VII.—Port	4,31,120
VIII.—Port approaches	5,75,450
IX.—Railway	7,56,550
X.—Wet docks	19,94,600
XI.—Dry "	2,25,500
Miscellaneous	10,000
Total ...	65,01,760

Expenditure.

	Rs.
I.—Control	5,59,962
II.—Jetties	5,15,980
III.—Tea Warehouse	65,443
IV.—Petroleum wharf	90,100
V.—Inland vessels' wharves	1,32,271
VI.—Rentable lands and buildings	92,591
VII.—Port	4,65,879
VIII.—Port approaches	5,44,335
IX.—Railway	5,66,372
X.—Wet docks	19,74,731
XI.—Dry "	56,833
Provision against unforeseen expenditure and alterations chargeable to Revenue	45,000
Interest and sinking fund charges	26,52,661
Total ...	77,62,158
Deficit ...	12,60,398
River dues leviable under section 108 of the Calcutta Port Act	13,00,000
Estimated surplus ...	39,602

2. The estimated gross increase based on the existing schedules of rates and charges amounted to Rs. 79,21,760; but proceeding on the principle which has guided the Commissioners during the last two years that the river due on goods should be maintained at the rate of four annas per ton, and that the charges for the use of the Jetties or other similar charges should be reduced, the Port Commissioners have again resolved to make further concessions to the trade

to the extent of Rs. 1,20,000, thus reducing the estimate to Rs. 78,01,760. The reductions made are on the following heads:—

	Rs.
Harbour Master's fees for work done before and after the regular working hours	14,000
Charges for transporting vessels	36,000
Reduction in the rate of hire for the 30-ton crane	20,000
Ditto of wharfage rate on imports	50,000
Total ...	1,20,000

3. In the year 1902-1903 charges payable on goods and vessels were reduced to the extent of Rs. 1,76,000 per annum, and again on 1st April 1903 these charges were further reduced by Rs. 2,28,000, and now it is proposed to make further reductions to the extent of Rs. 1,20,000. An annual reduction in the income of the Commissioners, amounting to Rs. 5,24,000, is caused by these measures, and the Commissioners are to be congratulated on their ability to make this large concession and still be able to keep the Trust property in a satisfactory condition.

The expenditure is estimated at Rs. 51,09,497, showing an increase of Rs. 88,905 on the figures of the preceding year. An abstract comparing the estimates of the two years is given below:—

	1904-05.	1903-04.
	Rs.	Rs.
Establishment	20,80,689	19,70,599
Stores	3,71,575	3,57,623
Maintenance and repairs	7,08,045	8,10,365
Labour	12,49,930	11,55,060
Miscellaneous	6,63,061	6,89,750
Police	61,217	61,199
Unforeseen expenditure	20,000	20,000
	51,54,517	50,64,596
Deduct chargeable to Capital account ...	45,020	44,004
Total ...	51,09,497	50,20,592

4. It is satisfactory to notice the large decrease under "Maintenance and Repairs," but, on the other hand, the saving is more than counterbalanced by an increase under "Establishment." This is an item of expenditure which needs to be closely watched. An examination of the schedule shows that in some cases the status of existing appointments has been raised. As the limit of salary of each appointment over Rs. 500 a month requires the sanction of Government, no increase should be allowed in excess of this limit without such sanction. Increments within the maximum pay of the appointment should not be given before due date without the previous sanction of Government.

CAPITAL.

5. The capital budget provides for an expenditure of Rs. 36,92,563 on new works and of Rs. 4,28,000 on renewals of vessels and a timber jetty, making a total of Rs. 41,20,963. The greater part of the expenditure on new works will be spent on works already sanctioned by Government. It is proposed to obtain the funds for capital expenditure by a debenture loan, an application for which will be made later in the year.

6. In pursuance of the powers vested in him by section 71 of the Calcutta Port Act, 1890, the Lieutenant-Governor approves of the estimate of the income and expenditure of the Commissioners for the year 1904-1905.

By order of the Lieutenant-Governor of Bengal,

D. B. HORN,

Secretary to the Govt. of Bengal.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

⩍ dew.

N.B.—In the week's report from 20th to 26th March 1904 read 29·789 for 29·879 as the average pressure of the corresponding period for 24 years, Surveyor-General's Office.

[Fourth Publication.]

No. 20.—Notification.—It is hereby notified for general information that the Lieutenant-Governor of Bengal proposes, under the provisions of sections XI and XII of Act V (B.C.) of 1864, to pass the following rules in modification of those now in force on the Calcutta Canals and Tolly's Nala with effect from 1st July 1904.

D. B. HORN,
Secy. to the Govt. of Bengal.

Revised Rules for the Calcutta Canals and Tolly's Nala.

The rules shall apply to the following navigable channels which are included under the designation "Calcutta Canals and Tolly's Nala":—

I.—The Circular Canal comprising the still-water canal between the Dhappa and Chitpur Locks and the New Cut Canal from Ultadingi to Dhappa Lock, together with its junction with the river Hooghly and the Orange Soorah at Dhappa.

II.—The Central Lake Channel from its junction with the Circular Canal at the Dhappa Lock to its junction with the Biddiadharee at Bamunghatta.

III.—The Nowbhanga khal, extending northwards for a mile from its junction with the Central Lake Channel below the Dhappa Lock.

IV.—The Soorah from its junction with the Central Lake Channel below the Dhappa Lock and extending to the fish market situated adjacent to, and to the west of, the Dhappa Inspector's residence.

V.—Tolly's Nala extending from a line drawn across the Nala 25 feet west of the Hastings Bridge at Kidderpore to the Biddiadharee river at Samookpota.

1. Every vessel on entering the Calcutta Canals or Tolly's Nala shall be liable to measurement for the purpose of ascertaining the tolls payable; in case of any reasonable doubt arising, the persons appointed by the Lieutenant-Governor to collect tolls and officers to whom such persons are subordinate shall have authority to again measure a vessel notwithstanding that it was measured on entering the canals.

2. Vessels for the purposes of the determination of tonnage shall be divided into two classes as below:—

Class I.—To include all vessels of the usual native types of build.

Class II.—To include all steamers, flats and barges, and other square built boats.

The net tonnage of every vessel, whether laden or empty, shall, for the purposes of Act V (B.C.) of 1864 and of these rules, be determined by the following measurements:—

Class I.—

A.—The product of one quarter the length of the vessel from stem to stern, measured along the water-line, multiplied by the interior greatest breadth of the vessel multiplied by the depth from the water-line to the interior bottom of the vessel, is to be taken as equal to the number of maunds upon which toll shall be levied.

B.—The measurement of the length is to be made in feet, rejecting inches; the measurement of the breadth and depth is to be made in feet and quarters of a foot, rejecting any remainder of less than a quarter of a foot.

C.—The maundage on which the amount of toll is calculated shall be reckoned to the nearest integral multiple of 12½ maunds, any remainder of less than 12½ maunds being rejected. In the case of boats exceeding 500 maunds by measurement, the maundage shall be reckoned to the nearest integral multiple of 50 maunds rejecting any remainder of less than 50 maunds.

D.—Provided that in the case of vessels which enter the canals at Chitpore, Kidderpore and Chetla empty, for the purpose of loading therein, the depth shall be measured from the line of usual immersion when fully loaded as visible on the outside of the vessel to the bottom (interior) of the vessel, and not from the line of actual immersion at the time of measurement.

Class II.—

For vessels of Class II the number of maunds obtained by the system of measurement prescribed for vessels of Class I, shall be increased by one-half. For vessels of this class above 5,000 maunds measurement the maundage shall be reckoned to the nearest integral multiple of 500 maunds rejecting any remainder of less than 500 maunds. In the case of steamers, the maundage determined as above shall be reduced by one-third as an allowance for engine space.

For vessels of Class II which are furnished with reliable way-bills the gross maundage of cargo shown by the way-bills may at the option of the employer of the vessel be taken as the maundage on which toll will be charged. Provided that firms or individuals who wish to make use of this rule, must be approved by the Superintending Engineer of the South-Western Circle, and that such approval may be withdrawn for any just cause.

3. Every vessel entering the canals shall be furnished with a ticket on which the name of the serang, manjee or other person in charge of the vessel, the date of entry, the maundage of the vessel, the cargo it contains, the amount of toll charged, and the number of days for which the ticket remains current, shall be entered.

4. All tolls are payable on demand and shall be paid at the toll station before a vessel is permitted to proceed. Provided that the Collector of Tolls appointed under section VIII of the Act may at his discretion permit vessels belonging to individuals or firms of recognised standing to proceed without pre-payment, on an undertaking that the bills for tollage due shall be liquidated monthly on presentation.

5. The ticket must be kept on board the vessel and must be produced for inspection when demanded by any person authorised to collect tolls, or by any officer to whom such person is subordinate. If on demand the ticket is not produced, such person or officer shall assess the tollage as provided in rule 2 and shall require payment of toll, and unless and until the toll is paid, or the original ticket or a duplicate is produced as evidence that toll has already been paid, the vessel shall be liable to seizure and detention under the provisions of section IX of the Act.

6. Duplicates of lost tickets, of which the numbers and dates can be satisfactorily established, will be granted by the Collector of Tolls on payment of a sum of one rupee. Provided that for tickets on which the total tollage is less than four rupees, the fee to be charged for a duplicate shall be one quarter of the total tollage.

7. A vessel which has been detained under these rules or under section IX of the Act, may not be removed from the canal without the order of the Collector of Tolls until the toll due has been paid. During such detention the manjee, owner, or agent must make arrangements for the safety of the vessel and cargo.

8. All vessels, whether the property of Government or of private owners, are liable for toll except those exempted by the provisions of Bengal Government Notification No. 261, dated the 21st July 1890.

9. Vessels may be hauled up for repairs on the banks of the canals with the previous written permission of the Supervisor appointed by the Lieutenant-Governor, under section XIII. A rent calculated at one-sixth the rate of ordinary demurrage will be charged for the time the vessel occupies the bank.

10. At places where mooring posts have been provided by the Supervisor, vessels desiring to moor shall be made fast in single line along the banks to such posts in such manner as the Supervisor may direct and shall not be moored in any other manner.

11. The Supervisor may by written notice to be posted at the Toll Offices, prohibit the dropping of anchors or the putting up of bamboos or *luggees* in any specified part of the Canals or on the banks.

12. Boats shall be allowed to make fast in single line along the canal banks in such manner as may be directed by the Supervisor, and no boat shall be made fast or be placed outside of boats so secured. No boat or raft shall be placed in such a position as to endanger the safety, or obstruct the passage, of other boats.

13. Boats passing through the canals shall keep in separate lines, empty boats keeping close to the bank and those that are laden in the centre.

14 In portions of the canals where only one towing path exists, vessels shall moor on the side opposite to the towing path, and the towing path side shall always be kept clear.

15. Iron built cargo boats, with outside angle irons projecting beyond the wooden fenders, will not be allowed to enter the locks unless permanent fenders are fixed over the edges of the angle iron so as to prevent them from causing damage to the lock.

16. No fire, or open or unprotected light of any description, shall be used on boats containing petroleum, jute, hay or straw while in the Calcutta Canals or Tolly's Nala; and

no fire or open or unprotected light (except in the case of steamers, the galley and engine-room fires and the electric light) shall be used on any vessel while in a lock basin.

17. No person shall wilfully or negligently allow a vessel to sink in the canals.

18. In every case of a sunken vessel whether due to negligence or otherwise, the Supervisor and his subordinates shall offer every assistance in removing the same.

If three days after the occurrence of a wreck, it is seen that prompt measures are not being taken by the owner to remove the sunken vessel from the line of navigation, the Supervisor and his subordinates shall make their own arrangements for the removal of the same at the expense of the owner.

19. When a sunken vessel has been recovered, the Supervisor shall cause notices to be posted at the locks, toll-offices, or other prominent places, calling on those concerned to pay to the Collector of Tolls all toll or demurrage which may be due, as well as the expenses incurred in the recovery of the vessel and cargo. Should the sum due be not paid within fifteen days of the date of notice, the boat and its furniture, or so much of it as may be necessary for the recovery of the dues, will be sold, under the procedure directed in section IX of the Act.

20. The purchaser of a vessel sold under the provisions of section IX of the Act shall have the right to take it out of the canal on the day of purchase, or within such time as may be allowed by the Collector of Tolls, without payment of tolls.

21. When any laden vessel which has sunk, has been recovered; or, when any laden vessel has been seized under the provisions of the Act, or of these rules, the Supervisor shall give immediate notice of the recovery or seizure to the owner of the cargo or his agent, requiring the removal of the cargo without delay, and informing him that he will be required to pay all expenses necessary for the proper custody and storage of the cargo until removed.

22. If the Supervisor be unable to ascertain the name and place of business or the abode of the owner of the cargo of such vessel, the notice prescribed in Rule 21 shall be effected by a notice exhibited in his office, and by advertisement in at least one English and one vernacular Calcutta newspaper.

23. Steamers are not allowed to tow flats or cargo boats in the Circular Canal, but may tow one flat or barge at a time astern in the New Cut Canal.

24. *Lights and signals.*—All vessels, whether travelling or moored in the Calcutta Canals or Tolly's Nala, must, between sunset and sunrise, carry a white light in a lantern on the fore-part of the vessel where it can be distinctly seen from all sides. All steam vessels in motion shall carry the lights prescribed by the Board of Trade Regulations. Barges or boats attached to a steam vessel, whether in motion or moored, shall carry the light prescribed above.

25. *Speed of vessels.*—Every vessel proceeding through the Calcutta Canals and Tolly's Nala must, between sunset and sunrise, limit her speed to three miles per hour.

26. For any contravention of Rules 7, 11, 12, 13, 14, 16, 17, 23, 24, and 25 the person in charge of the vessel or other person in fault shall, on conviction before a Magistrate, be liable to a fine not exceeding Rs. 50 or Rs. 5 a day for any continuing infringement.

27. No boats will be allowed to remain between the Dwarf walls of the entrance channels to the Dhappa and Chitpur Locks.

RAILWAY DEPARTMENT.

The 2nd May 1904.

No. 111R.—Declaration—Whereas it appears to the Lieutenant-Governor of Bengal that land is required to be taken by Government at the expense of the East Indian Railway Company for the Gaya-Katras Railway (Plateau section) in the villages of Barano, Gargi, Dusara, and Kattia, tahsils Barhi and Koderma, zilla Hazaribagh, it is hereby declared that for the above purpose three pieces of land measuring, more or less, 9·58 acres, bounded as follows, are required within the aforesaid villages:—

No. 1 piece, for tramway line to brick-field—Bounded on the north by the Kesu river and Gaya-Katras Railway brick-field land, on the south by the land of Gaya-Katras Railway main line, and on the east and west by the land of village Gargi.

Nos. 2 and 3 pieces, for main line (spoil bank)—Bounded on the north by the land of village Barano, and on the south, east, and west by the land of Gaya-Katras Railway main line.

Mines of coal, iron-stone, slate or other minerals lying under the land, except only such parts of the mines and minerals as it may be necessary to dig or carry away, or use in the construction of the work for the purpose of which the land is being acquired, are not needed.

This declaration is made, under the provisions of section 6 of Act I of 1894, and section 3, clause (1), Act XVIII of 1885, to all whom it may concern.

A plan of the land may be inspected in the office of the Engineer-in-charge, Gaya-Katras Railway, Manpur.

No. 112R.—Declaration.—Whereas it appears to the Lieutenant-Governor of Bengal that land is required to be taken by Government at the expense of Babu Monindra Chandra Roy and others for an assisted siding at Satakpur, Ondal Loop, East Indian Railway, in the village of Sarthokpur, pargana Sherghur, zilla Burdwan, it is hereby declared that for the above purpose a piece of land measuring, more or less, 3 cottahs and 2 chitaks of standard measurement (corresponding to 8·26 poles), bounded on the north by the paddy-lands of Dhukit Sontal, on the south and west by the East Indian Railway lands and on the east by the colliery lands of Tarini Prosad Roy and others, is required within the aforesaid village of Sarthokpur.

Mines of coal, iron-stone, slate or other minerals lying under the land, except only such parts of the mines and minerals as it may be necessary to dig or carry away, or use in the construction of the work for the purpose of which the land is being acquired, are not needed.

This declaration is made, under the provisions of section 6 of Act I of 1894, and section 3, clause (1), Act XVIII of 1885, to all whom it may concern.

A plan of the land may be inspected in the office of the District Engineer, East Indian Railway, Asansol.

No. 318.—The services of Mr. H. J. McIntosh, of the Indian Civil Service, are replaced at the disposal of the Government of Bengal, with effect from the 7th April 1904.

MEDICAL.

The 26th April 1904.

No. 395.—The Governor-General in Council is pleased to direct that the following shall be substituted for paragraphs 3 and 4 of the Home Department Notification No. 437, dated the 25th July 1893, as amended by the Home Department notifications noted on the margin, regarding the remuneration of medical officers for attendance on native chiefs and nobles and native gentlemen of high position in a native State:—

No. 1930, dated the 8th October 1900.
" 852, " 12th June 1901.

"3. The native chief, noble or gentleman may offer any medical officer of Government attending him such fee as he thinks fit. The offer made will be reported by the medical officer to the Political Agent or other officer of Government exercising political functions in the State of which the said chief, noble, or gentleman is a resident, for the consideration of the Local Government within whose jurisdiction the native State is situated. This report will state the period during which he was in attendance and the number of visits paid. The medical officer will at the same time submit to the Administrative Medical Officer, or Inspector-General of Civil Hospitals, to whom he is subordinate, a full medical statement of the case showing the nature and extent of the relief afforded, the importance of the case from a professional point of view, and the circumstances in which he attended the patient. The Local Government is required to satisfy itself that the fee proposed is not out of proportion to the relief afforded and to the circumstances of the case, and has authority to sanction the acceptance of a fee not exceeding Rs. 2,000. In considering these questions it will, if necessary, refer to the Administrative Medical Officer or Inspector-General of Civil Hospitals, as the case may be. If the proposed fee exceeds this sum, the matter will be submitted, with a full report, by the Local Government for the consideration and orders of the Government of India.

"4. The reports prescribed in the preceding paragraph will not be required from a medical officer when the fee does not exceed Rs. 50 a visit, or Rs. 1,000 in the aggregate for repeated visits in the course of a year."

Advertisement of Sale.

NOTICE is hereby given that the proprietary right of Government, as specified in the conditions of sale below, to the undermentioned estates situate in the district of Nadia, will be put up to sale at the Nadia Collectorate on Friday, the 13th May 1904, corresponding with 31st Baisakh 1311 B.S.

The purchasers will be subject to the following conditions of sale:—

Conditions of Sale.

1st.—The estates to be sold to the highest bidders above the upset price, which will be fixed by the Collector at the time of sale. The purchasers of these estates will be considered as proprietors of the estates, and the entire proprietary right of Government in such estates will be transferred to them subject to the revenue fixed in perpetuity.

2nd.—The sale to be subject to existing leases and to the rights conferred by the settlement proceedings and by the laws in force, and purchasers to be bound to respect the rights of resident cultivators who have signed the schedule of assessment prepared by the revenue authorities.

3rd.—If the amount of purchase-money do not exceed Rs. 100, the whole amount to be paid down at once.

4th.—If the amount of purchase-money exceed Rs. 100, one-fourth of the amount bid to be immediately deposited. If the balance be not paid by noon of the fifteenth day after the sale, reckoning the day of sale as one, or if that day be a close holiday, then by noon of the first succeeding office day, the sale is to be cancelled (the sum deposited being forfeited to Government), and the estate to be again put up to sale at the risk of the defaulting purchaser, after issue of advertisement, as in the case of original sale.

THE INDIAN LAW REPORTS.

Published in FOUR SERIES, viz.:

CALCUTTA, MADRAS, BOMBAY AND ALLAHABAD.

THE Indian Law Reports, published under the authority of the Governor General in Council, are printed in monthly Parts, which are issued, as soon as possible after the first of each month, at Calcutta, Madras, Bombay and Allahabad, respectively.

The Reports comprise four Series—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court.

The cases heard by the Privy Council on appeal from each High Court are reported in the Series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.

The Calcutta Series is distributed by the Bengal Secretariat Book Depôt; and the Madras, Bombay and Allahabad Series are distributed direct from Madras, Bombay and Allahabad, respectively.

Persons desiring to subscribe for or purchase the Reports should apply to—

the Officer in charge, Bengal Secretariat Book Depôt, Calcutta,
or
the Superintendent, Government Press, Madras, or
the Superintendent, Government Central Press, Bombay, or
the Curator of Government Books, United Provinces of Agra and Oudh, Allahabad.
